STAIRPORT

SAM2

AIRPORT VEHICLES

The AirportVehicles Extension provides worldwide replacement vehicles on default airports created by ShortFinal Design aka MisterX.
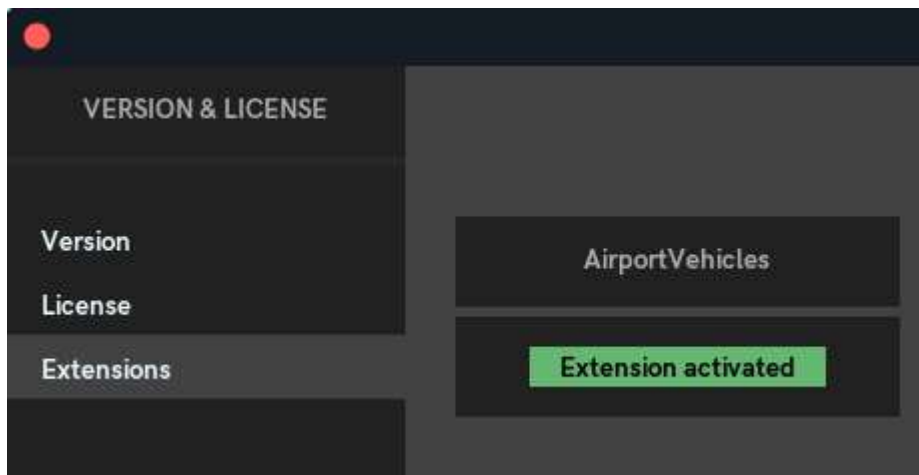

INSTALLATION

All necessary files are already included in the SAM download package. There is no need for a separate installation.

ACTIVATION

The AirportVehicles Extension requires a separate activation with a one-time internet connection. Once the purchasing process of your favorite online store has been completed you should receive a serial.

To activate AirportVehicles start X-Plane and go to the *Version & License* menu via *Plugins->SAM*

Navigate to the *Extensions* page and click on *Activate extension*.

Enter your Email address used for your online shop and the serial and click *Activate*.

After successful activation you must restart X-Plane. If you have any problems, please use our helpdesk: https://stairportscenerieshelp.freshdesk.com/support/home.

From now on no active internet connection is required anymore.

STEAM

If you purchased the AirportVehicles Extension through Steam the manual activation is not required. As long as Steam is running prior to X-Plane startup the extension will be activated automatically.
